7. The Gospodariile Agricole de Stat (GAS - State Agricultural Administration) in the Braila district has the following stations: GAS Braila, Urleasca, Liscoteanca, Iosif Criscisc at Staneuta, Balcia Frecatei, Berea Barbu at the Dedulesti station, Romanu, Iavel Pacenco, and Nicolesti Jianu. In 1949 there were more stations but some of them were merged into a larger unit. Thus the farm Dajna Vadeni, Gospodaria Vadeni, and Gospodaria Csariu were merged into the GAS Braila. Traton Sat became attached to Urleasca. These agricultural units lack qualified directors, technicians, accountants, and are poorly organized.
8. The Gospodariile used investment funds to construct winter shelters for the sheep, quarters for workers, and grain warehouses.
9. The managers of the Gospodariile and SNT are political appointees who receive a salary ranging from 8,000 to 22,000 lei per month.
10. In the IX Regional Direction, Focsani, guardhouses were constructed near all important bridges in Moldavia to prevent sabotage by partisan groups. The houses are made of brick, 10 meters by five meters.
11. In the Iufesti region where the Siret River branches into two parts, a dike was built to close off one of the branches, which at times threatens the village of Domnesti. The dike consists of wickerwork and bags filled with rocks.
12. Work is underway on the bridge crossing the Siret River in the village of Sendreni. Foundations are being laid with the aid of compression hammers.
13. All the above projects utilizing investment funds of the FCI (Banca de Credit Petru Investitii - Credit For Investment Bank) make ten day or monthly reports, the basis on which payment out of the funds is made. Reports are checked on the spot, and then payments are made.
- 25X1 14. In his field inspections [redacted] saw a lack of manual labor. The standard labor norm fixed by the Ministry of Construction barely permits a worker to achieve this norm.
 - a. Foundations used in constructions use ballast instead of gravel.
 - b. Factories are compelled to produce as much as possible and as rapidly as possible, resulting in inferior products.
 - c. New bricks size 24 by 12 by 6 centimeters, instead of the normal 23 by 14 by 7 centimeters, are now used. This requires new calculations and more money.
 - d. Orders are never filled on time and many projects are left unfinished.
15. There is a delay in work because approval is necessary by the Institute of Civil Constructions Projects (INC), and the Institute of Industrial Projects (IIP), as well as the Ministries concerned.
